Test environment

It is the setup in which testing is performed. It includes hardware, software, and network configurations required for testing. In the case of an this project, the test environment can be divided into the following:

Hardware

Computers, mobile devices, and any other required peripherals with the appropriate configurations.

Software

Web browsers (Chrome, Firefox, Safari), operating systems (Windows, Mac, Linux) and any other software required for the project.

Network

Internet connectivity, firewall settings, and network bandwidth. The network should also have the required security settings, such as SSL certificates, to ensure secure transactions during testing.

Data

The test environment should have the necessary data required for testing, such as user data, product data, and order data. The data should be prepared and configured according to the test scenarios.
